

Japanese precision work - the extreme banana plug

SRBN

We enhance our product quality by paying careful attention to each detail of structural characteristic, texture and appearance. When such details are integrated successfully, a product is completed perfectly. All elements, the impression of rigidity, beautiful guilloche pattern on the surface inspired by luxurious Swiss watch, brilliance of the buff finished body, and the blue stainless-steel screws which are reminiscent of hands of a watch, represent sublime sound image of SRBN. SRBN is the extreme banana plug which is created by the fusion of the excellent sound and design quality.

Material : Phosphor bronze

Plating : Silver (1.5 μ , inner) + Rhodium (0.3 μ , outer)

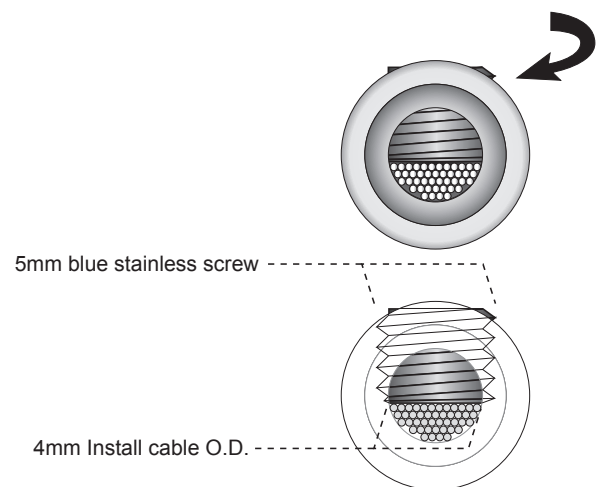

Connection : Dual clamping screw system

Diameter : 8.0mm

Install cable O.D : \sim 4.0mm (5.5sq)

Packing : 4 pieces in a box

Attachment : L-form hex wrench

★ Feature ★

- The highly-rigid 5mm stainless screw is used for the 4mm cable penetration part. This infills inside space between the body and the screw. The dual clamping screw system ensures absolute contact and fixation.
- The body is trimmed down from 8mm phosphor bronze bar by precision CNC machining. It is finished by mechanical barreling and hand polishing piece by piece.
- The plating of the mirror finished body is a combination of silver (1.5 μ , inner) + rhodium (0.3 μ , outer).
- The insertion part is slit up in a cross shape and divided in quarters to ensure maximum contact area.
- The size was determined based on a speaker terminal of WBT. After more than ten times of repeated cut and try by micron scale, SRBN was exquisitely-designed to be inserted smoothly and not to be come off easily.
